EDUCATION

Zhejiang University   Sep 2020 – present
Major: Electronic Engineering
GPA: 3.92/4.0 (88.89/100)

RESEARCH EXPERIENCE

LiDAR-based Place Recognition Using Bird's-eye View Projections   Jul 2022 – Dec 2022

Co-Principal Investigator

- Proposed a method for LiDAR-based place recognition using bird's-eye view (BEV) images, achieving the state-of-the-art performance. We used group convolution to extract rotation-equivariant local features from the images and NetVLAD for global feature aggregation.

Image-to-point cloud Cross-modal Place Recognition   Dec 2022 – Feb 2023

Co-Principal Investigator

- We gave an initial attempt to solve the image-to-point cloud place recognition task, by converting both the images and the point clouds to BEV images. Then on these BEV images, we conduct feature extraction and matching.

Tunable Nonlinear Edge Detection   Jun 2022 – Nov 2022

Principal Investigator

- Proposed a simple structure of a metamaterial thin film that can perform edge detection, whose effect can be changed by varying light intensity. By constructing metal quantum wells, the reflection rate of the film varies according to different incident angles.

HONORS AND AWARDS

National Scholarship (Top 0.2% across China) (2 Times)   Dec 2021 & Dec 2022

Dahua Outstanding Student Scholarship   Nov 2022

Zhejiang University Scholarship – First Prize (Top 3%) (2 Times)   Dec 2021 & Dec 2022

Second place of ICRA 2022 General Place Recognition Competition   Oct 2022

SKILLS

Tools: Latex, Linux shell, PyTorch, OpenCV, Markdown
Programming Languages: Python, C, Java, MATLAB, Verilog.
